

AI for your maths class, step by step

No coding, no cost. If you can send a WhatsApp message, you can do this. Keep this sheet handy.

1 Open a free AI tool

Use ChatGPT or Gemini (easiest). Sign in with Google - free.

ChatGPT
chatgpt.com

Gemini
gemini.google.com

Claude
claude.ai

Copilot
copilot.microsoft.com

2 How to attach a photo of a question

Phone: in the typing bar tap the + (or paperclip), choose **Camera** to click it now or **Photos** to pick one, then select it - a small picture appears = attached. **Computer:** click the **paperclip** and Upload, OR just drag the image onto the box, OR copy it and press Ctrl/Cmd + V.

3 Copy a prompt and paste it

Tap "Copy prompt" on the website. Back in the chat, long-press and Paste (phone) or Ctrl/Cmd + V (computer). Attach the photo FIRST if the prompt needs one.

4 Fill the [BRACKETS] and send

Replace [CLASS], [BOARD], [TOPIC] with your details, press Send/Enter, then download or screenshot. Your name is signed on it automatically.

If something doesn't work

- **No + button?** Tap "New chat" first; sign in. Gemini/Claude show upload free; ChatGPT shows + on the left of the bar.
- **Got text, wanted a picture?** Use a "Makes images" prompt in ChatGPT/Gemini and say "generate this as an actual image". Free plans limit images per day.
- **Only one page made?** Reply "now generate Page 2", then 3, 4, 5.
- **Mistake?** Reply "re-check step 3 and verify the answer a second way", or send a clearer photo.
- **Want Hindi?** Add "write everything in Hindi" to any prompt.
