

AI for your maths class in 4 simple steps

No coding. No cost. If you can send a WhatsApp message, you can do this.

Keep this page in your staff room.

1 Pick a prompt and copy it

Open the Maths Prompt Studio website (or the prompt book PDF). Choose what you need - a solution, a question paper, a worksheet - and tap "Copy prompt".

2 Open a free AI chat

Use any of these in your browser. Sign in once (free): ChatGPT, Google Gemini, Claude, or Microsoft Copilot.

ChatGPT

chatgpt.com

Gemini

gemini.google.com

Claude

claude.ai

Copilot

copilot.microsoft.com

3 Attach a photo (only if asked), then paste

If the prompt says "Photo needed", tap the + / image button and add a clear photo of the question. Then paste the prompt (Ctrl/Cmd + V, or long-press then Paste).

4 Fill the [BRACKETS] and send

Replace things like [CLASS/GRADE] and [BOARD] with your details, press Enter, then download or screenshot the result. Your name is signed on it automatically.

5 quick tips

- One question per photo - crop out the rest.
- Good light and a flat, straight page help the AI read the maths.
- Not happy? Reply "make it simpler", "add one more method", or "make the writing bigger".
- For 5-page art styles that come one at a time, say "now generate Page 2", then 3, 4, 5.
- Always glance over the answer before class - AI is great but not perfect.
